

# PIONEERING DEVELOPMENTS FOR PAXMAN SCALP COOLING

## Introducing the Paxman Scalp Cooling System (PSCS) and new improved cooling caps.

As the undisputed global leader in scalp cooling, we are committed in our mission to raise the success rate of 'zero hair loss' from 50:50 to 80:20 by 2020. Our innovative approach is driven by and for the patient.

# PIONEERING DEVELOPMENTS FOR PAXMAN SCALP COOLING

## Paxman Scalp Cooling System (PSCS)

The improved simplicity of the new generation of Paxman Scalp Cooling employs an interactive user interface and touchscreen ensuring ease of use for clinical staff.

Maintaining coolant levels is also simplified by a visual warning system display and an easy-to-use self drain coolant refill bag.

## Paxman Cooling Caps

Effective cap fitting is crucial to successful scalp cooling outcomes. Following extensive anthropometric research regarding head shapes, three different Paxman cap sizes have been developed to meet the needs of all patients.

- Better fitting cap due to more contoured shape, resulting in reduced or NO crown hair loss
- Cap size selection process is more than halved due to ease of fitting and only 3 cap sizes to choose from
- No interchanging cap & covers required
- Internal bungee straps secured by a toggle at the back ensure a tighter more secure fit
